From 1988 to 2002, my main research subject was the study of the interactions of energetic particles (ions, clusters, molecules, photons) with matter. From 2002 to 2018 at the ICSN in Gif-sur-Yvette, in charge of a project of biological imaging by mass spectrometry by cluster-TOF-SIMS and MALDI-TOF. This work was conducted in three directions: treatment and use of biological tissue sections, improvement of instrumental methods, and application to in situ studies of lipid disorders linked to human diseases. From 2010 to 2018, Head of Mass Spectrometry Group at ICSN-CNRS. Since 2019, new project at the Laboratoire d'Archéologie Moléculaire et Structurale (LAMS UMR8220, CNRS, Sorbonne Université, Paris) to study cultural heritage samples like old paintings, by submicrometric and 3D TOF-SIMS imaging.

Expertise field: Mass spectrometry instrumentation (time-of-flight analysers, detectors, ion sources), Mass Spectrometry Imaging.
